— ABOUT DURRAKA FACTORY

Who We Are

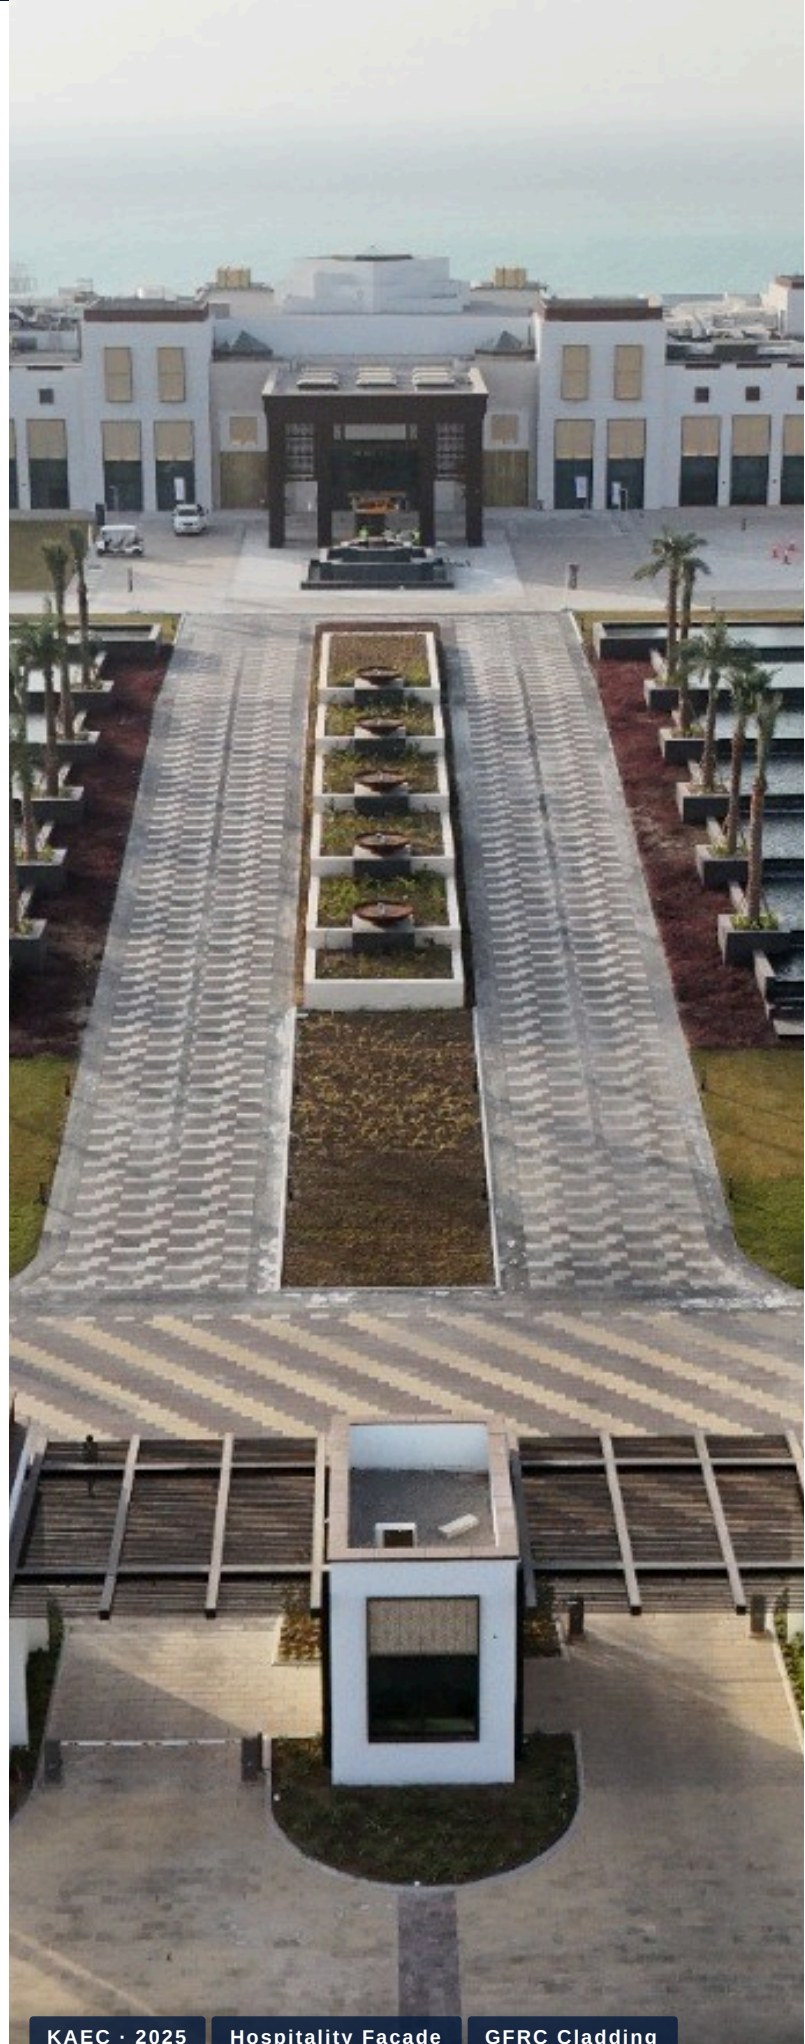

Durraka Factory for Industry is a Saudi-based manufacturer specialising in **Glass Fibre Reinforced Concrete (GFRC/GRC)** architectural systems — facade cladding, heritage profiles, decorative elements, and landmark components.

We supply contractors, architects, developers, and private clients across Saudi Arabia and the wider GCC with engineered-to-brief GFRC solutions — from concept design through factory production and site delivery.

KEY CAPABILITIES

- ✓ Custom mould engineering for any geometry
- ✓ Shop drawing preparation & consultant submission
- ✓ Factory production with QC documentation
- ✓ Gulf climate-optimised mixes & finishes
- ✓ Design-stage collaboration with architects

CR No. 4602002725 · Kingdom of Saudi Arabia ·

— MATERIAL SCIENCE

What Is GFRC / GRC?

Facade Cladding Panel

Institutional Facade

Glass Fibre Reinforced Concrete is an advanced composite of Portland cement reinforced with alkali-resistant (AR) glass fibres. Unlike conventional concrete, GFRC is lightweight, highly workable, and capable of capturing fine architectural detail.

MATERIAL PROPERTIES

Weight: 1,800 – 2,000 kg/m³ — far lighter than precast concrete

Thickness: 10 – 20 mm typical cladding; thicker for profiles

Finish: Smooth, sandblasted, acid-etched, painted, textured

WHY SPECIFY GFRC?

- › Lightweight — reduces structural load vs. stone or precast
- › Complex geometry — achieves curves, ribs, and fine ornamental detail in mould
- › Durable — resistant to impact, UV, and Gulf coastal climate
- › Dimensionally consistent — controlled factory production from engineered moulds
- › Integral colour — pigmented throughout or surface-coated to specification
- › Sustainable — lower material volume than equivalent solid precast

— GFRC / GRC SYSTEMS

Six Architectural Systems

Durraka manufactures six categories of GFRC/GRC architectural elements — all produced to custom specifications and approved shop drawings.

Façade Cladding

Cornices & Profiles

Domes & Vaults

Columns & Capitals

Mashrabiya Screens

Custom Decorative Elements

Detailed technical specifications, dimensional references, and engineering data for each system category are available in the **B2B Detailed Catalog** — request access at durraka.com/catalog.

— SYSTEM 01 — FAÇADE CLADDING

Façade Cladding Systems

Custom GFRC cladding panels for external facades — from modular flat panels to complex curved and profiled systems. Suitable for hospitality, commercial, civic, and mixed-use buildings.

- › Flat, curved, and profiled panel systems
- › Integral colour or surface-coated finishes
- › Produced to approved shop drawings
- › Available with custom joint and reveal patterns

Facade Cladding Panel

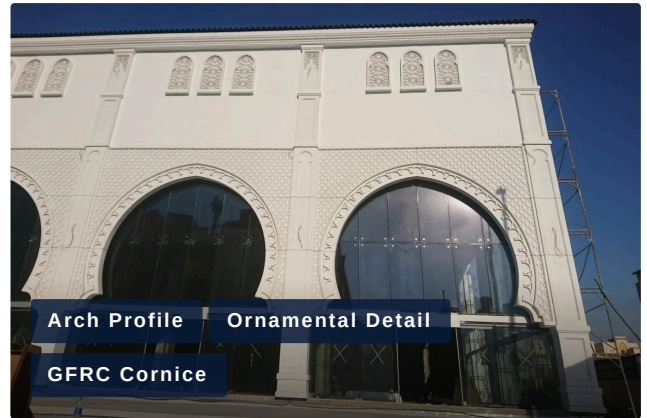

GFRC Cladding

Arch Frame

— SYSTEM 02 — CORNICES & PROFILES

Cornices & Profiles

Horizontal cornice runs, band courses, sill profiles, and decorative mouldings — straight or curved on plan. Produced in continuous lengths with consistent cross-section and finish.

Arch Profile

Ornamental Detail

GFRC Cornice

Cornice Profile

Cladding Band

Facade Detail

- › Custom profile sections matched to architect drawings
- › Straight runs and curved on plan
- › Seamless appearance across joints
- › Available in smooth, textured, or painted finishes

— SYSTEM 03 — DOMES & VAULTS

Domes & Vaults

Full and segmented domes, half-domes, barrel vaults, and curved ceiling systems. Engineered from segmented GFRC panels and assembled on site — suitable for mosque, hospitality, and civic architecture.

Dome Interior

Ornamental Vault

GFRC Dome Segment

Vault Panel

- › Full, half, and segmented dome configurations
- › Custom diameter and rise to architect specification
- › Interior and exterior surface finishes
- › Engineered segment system for site assembly

— SYSTEM 04 — COLUMNS & CAPITALS

Columns & Capitals

Classical and contemporary column shafts, bases, and capitals in GFRC — round, square, and fluted profiles. Supplied as complete column systems or individual components.

Classical Column

Capital Detail

Column Portico

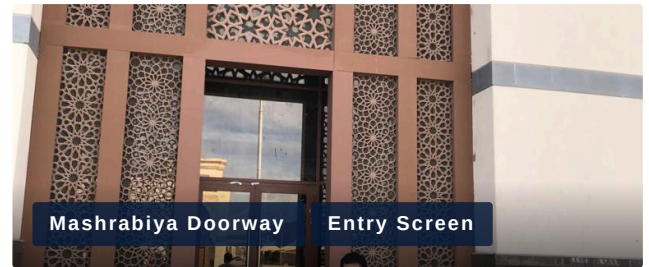

GFRC Column System

- › Round, square, and fluted shaft profiles
- › Classical and bespoke capital designs
- › Custom diameters, heights, and entasis
- › Compatible with base plate and pedestal systems

— SYSTEM 05 — MASHRABIYA SCREENS

Mashrabiya Screens

Traditional and contemporary mashrabiya lattice screens — geometric, calligraphic, and bespoke patterns. Available as fixed panel systems or framed modular arrays for facades, interior partitions, and skylight features.

Mashrabiya Doorway

Entry Screen

Lattice Screen

Mosque Mashrabiya

Mashrabiya Screen

Lattice Panel

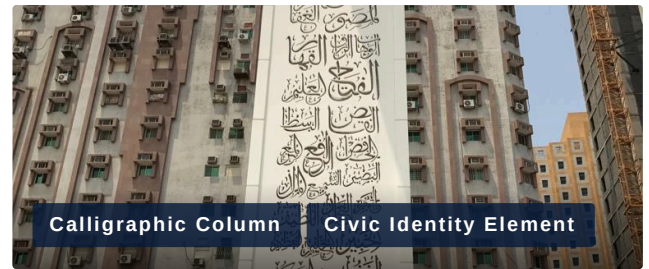

GFRC Screen

- › Traditional geometric and arabesque patterns
- › Contemporary bespoke lattice designs
- › Fixed panel or modular framed systems
- › Available as project-coordinated framed systems

— SYSTEM 06 — CUSTOM DECORATIVE

Custom Decorative Elements

Project-specific GFRG ornamental components — calligraphic panels, geometric reliefs, monumental frames, feature medallions, heritage reproduction pieces, and bespoke sculptural elements.

Calligraphic Column

Civic Identity Element

Arched Screen Panel

Custom GFRG Frame

Custom GFRG Element

Decorative Frame

Calligraphic Panel

- › Calligraphic and typographic relief panels
- › Heritage restoration reproduction profiles
- › Monumental feature frames and portals
- › One-off sculptural and medallion elements

— HOW WE WORK

From Brief to Site

01 Brief & RFQ

Submit drawings and scope. We review and typically respond within 1–2 business days.

02 Proposal

Scope breakdown, clarification, and budget estimate issued.

03 Shop Drawings

We prepare dimensioned drawings for consultant approval before production.

04 Sample Approval

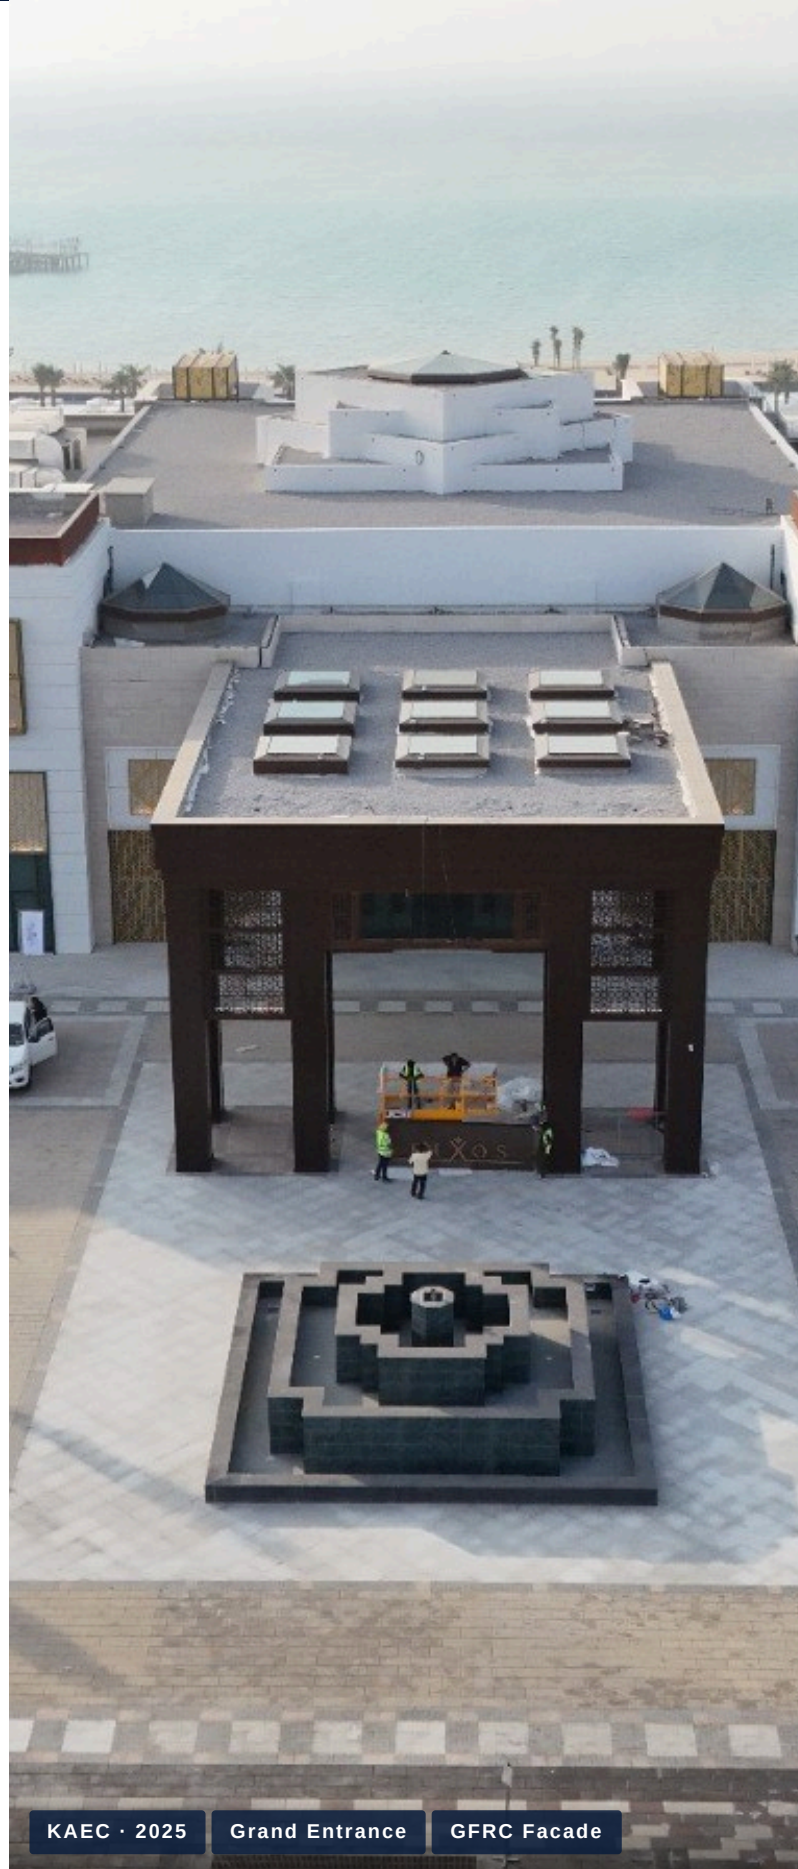

Physical finish samples submitted — production starts only after approval.

05 Factory Production

GFRC elements produced under controlled conditions with systematic QC.

06 Delivery to Site

Elements dispatched with QC records, delivery notes, and site coordination.

KAEC · 2025

Grand Entrance

GFRC Facade

Every project follows this workflow — ensuring that production begins only after all drawings and samples are formally approved.

— OUR ADVANTAGE

Why Durraka

KAEC · 2025

Hospitality Project

Grand Entrance

Saudi-Based Production

Factory in Saudi Arabia — shorter lead times, lower freight costs, direct site coordination.

Custom Mould Engineering

Custom-first profile engineering matched to approved drawings. Every project gets a purpose-engineered mould.

Gulf Climate Engineering

Mixes and finishes developed for UV, thermal cycling, humidity, and coastal Gulf exposure.

Documentation-Ready

QC records, dimensional reports, delivery notes, and data sheets supplied as standard.

Design Collaboration

We work alongside architects and facade consultants from the earliest design stage.

Consistent QC

Hold-point inspections at every production stage. Reference samples approved before full production.

TAKE THE NEXT STEP

Need the Detailed Technical Catalog?

Request the gated B2B Detailed Catalog — including system-specific technical references, project workflow, QA/QC overview, and RFQ requirements. Fulfilled within 1–2 business days.
