## ABOUT DURRAKA

## Who We Are

Durraka Factory for Industry is a Saudi-based manufacturer specialising in Glass Fibre Reinforced Concrete (GFRC/GRC) architectural systems. We supply custom-engineered facade elements, decorative components, and heritage profiles to leading contractors, architects, and developers across the Kingdom of Saudi Arabia and the wider GCC.

### Our Mission

To deliver architecturally ambitious GFRC/GRC solutions that combine the precision of engineered manufacturing with the craft of traditional Arabic design.

### Our Focus

Facade cladding, mashrabiya screens, domes, cornices, columns, and bespoke decorative elements — engineered to site-specific requirements.

## KEY STRENGTHS

- ◆ Bespoke Design Capability
- ◆ Saudi & GCC Market Expertise
- ◆ Technical Documentation
- ◆ Quality-Controlled Production
- ◆ Project Management Support
- ◆ Nationwide Delivery

## — THE MATERIAL

## What Is GFRC / GRC?

Glass Fibre Reinforced Concrete (GFRC), also known as GRC, is an advanced composite material consisting of a Portland cement matrix reinforced with alkali-resistant (AR) glass fibres. Unlike conventional concrete, GFRC is lightweight, highly workable, and capable of capturing fine architectural detail — making it the preferred choice for complex facade and decorative work.

## — MATERIAL PROPERTIES

**DENSITY**

Approximately 1,800–2,000 kg/m<sup>3</sup> — significantly lighter than precast concrete

**PANEL THICKNESS**

Typically 10–20mm for cladding; thicker sections for structural profiles

**FINISH OPTIONS**

Smooth, sandblasted, acid-etched, painted, or custom textured

**COLOUR**

Integrally pigmented or surface-coated to specification

## — WHY SPECIFY GFRC?

- › Lightweight — reduces structural load vs. stone or precast
- › Complex geometry — achieves curves, ribs, and fine detail in mould
- › Durable — resistant to impact, weather, and UV in Gulf climate
- › Dimensionally accurate — consistent production from engineered moulds
- › Sustainable — lower material volume than equivalent solid precast

**Note:** This catalog provides a public overview of GFRC/GRC capabilities. Structural data, mix performance summaries, and engineering annexes are available to qualified project teams upon request and NDA execution.

## — WHERE WE WORK

## Architectural Applications

GFRC/GRC is specified across a broad range of building typologies throughout the Gulf. Below are the primary application sectors Durraaka serves.

### Hospitality & Resort

Facade cladding, domed reception entries, decorative cornices, mashrabiya privacy screens, and custom feature elements for five-star hotels and resort complexes.

### Government & Civic

Monumental facades, heritage-inspired portals, ornamental columns, and prequalification-ready supply documentation for public authority projects.

### Commercial & Mixed-Use

Modular facade panel systems, entrance canopies, and branded architectural elements for office towers, retail centres, and mixed-use developments.

### Private Villas & Palaces

Bespoke cornices, columns, arches, decorative panels, and heritage profiles for luxury residential estates requiring premium Arabic architectural detail.

### Religious & Heritage

Traditional Islamic geometric patterns, mashrabiya screens, calligraphic panels, and heritage restoration profiles engineered to conservation standards.

### Educational & Healthcare

Durable, low-maintenance facade systems that meet institutional specification requirements — functional, refined, and cost-effective at scale.

## WHAT WE SUPPLY

## Six Core Package Categories

Each package is a configured scope of supply — engineered, produced, and delivered by Durraka.

### 01 Commercial Facade Package

Modular GFRC cladding panels, spandrel elements, soffits, and feature fins for commercial and mixed-use facades. Supplied with full dimensional documentation.

### 02 Mashrabiya Screen Package

Traditional and contemporary lattice screens in custom geometric patterns. Available as fixed panels, framed systems, or modular grid arrays.

### 03 Domes & Cornices Package

Structural and decorative domes, half-domes, vaulted ceilings, and cornice profile systems for heritage, religious, and landmark interiors and exteriors.

### 04 Grand Entrance Package

Monumental portal arches, ceremonial columns, ornamental gates, feature canopies, and entrance feature walls — custom to every project brief.

### 05 Columns & Capitals Package

Classical and contemporary column shafts, bases, and capitals in GFRC. Available in round, square, and fluted profiles with custom surface finishes.

### 06 Custom Decorative Elements

Project-specific ornamental components: calligraphic panels, geometric reliefs, spandrel medallions, custom moulds, and heritage reproduction pieces.

## — HOW IT WORKS

## From Brief to Site

Every Durraka project follows a structured workflow — from initial scope review through engineering, production, and handover. Here is the standard process:

### 01 Design & Brief Review

We receive the architectural drawings, specifications, and RFQ. Our team reviews scope, geometry, material requirements, and site logistics before issuing a preliminary proposal.

### 02 Shop Drawing Submission

Detailed shop drawings are prepared showing panel layouts, joint patterns, surface finishes, and reference dimensions. Submitted for architect/consultant review and approval.

### 03 Mould Engineering

Custom moulds are engineered and fabricated to match approved drawings. Mould quality directly determines dimensional accuracy and surface finish consistency.

### 04 Factory Production

GFRC panels and elements are produced under controlled factory conditions with systematic QC checks at each production stage. Each batch is identified and documented.

### 05 Quality Review & Approval

Finished elements are inspected against approved samples, dimensions, and finish requirements. Client or consultant inspection can be arranged prior to dispatch.

### 06 Delivery & Site Coordination

Elements are packaged, labelled, and delivered to site per agreed schedule. Our team coordinates with the main contractor to support installation planning.

## OUR ADVANTAGE

## Why Durraka

What differentiates Durraka is not just what we manufacture — it is how we engage with projects from the earliest design stage through to site handover.

### Saudi-Based Production

Our factory is located in Saudi Arabia — shorter lead times, lower logistics cost, and direct coordination with local contractors and project teams.

### Custom Mould Capability

We do not rely on stock profiles. Every project receives a custom-engineered mould matched to the architectural intent and approved shop drawings.

### Gulf Climate Engineering

Our mixes and finishes are developed for the Gulf climate — UV resistance, thermal cycling, humidity, and coastal exposure are factored into every specification.

### Documentation-Ready Supply

We supply full production documentation: material data sheets, quality control records, dimensional reports, and delivery schedules — ready for main contractor files.

### Design Collaboration

Our team works alongside architects and facade consultants during the design stage — advising on buildability, panel sizes, joint detailing, and finish options.

### Consistent Quality Control

QC checks at every production stage. Reference samples approved by the client before full production. Consistent output across large-volume panel runs.

## — START A PROJECT

# What to Include in Your RFQ

To prepare an accurate scope proposal and budget estimate, we need the following information from you or your consultant team.

## — PROJECT INFORMATION

- › Project name and location (city / region)
- › Project type (hospitality, commercial, residential, government)
- › Current design stage (concept, DD, tender, construction)
- › Estimated area or quantity per element type (m<sup>2</sup>)
- › Target completion date or programme milestone
- › Consultant or architect contact (for shop drawing review)

## — TECHNICAL SCOPE

- › Architectural drawings or sketches (PDF / DWG)
- › Element categories required (facade, dome, cornice, etc.)
- › Surface finish preferences (smooth, textured, painted)
- › Colour references or material specifications
- › Any relevant section details or profiles
- › Site access and delivery constraints (if known)

### After We Receive Your RFQ

Our team will review your scope within 1–2 business days and revert with a preliminary scope review, clarification questions if needed, and a timeline for delivering a detailed proposal. For projects requiring technical data sheets or engineering annexes, a qualified catalog and NDA process will be initiated.

## — GET IN TOUCH

## Request a Quotation or Detailed Catalog

Ready to scope your GFRC/GRC requirements? Contact our team directly or submit a quotation request through our website. For contractors and consultants requiring detailed technical documentation, request the B2B Detailed Catalog.
